Verde-Lawn™

Quick Acting Calcitic Limestone

37% Calcium (Ca)

Calcitic Limestone, combined with PHCA, improves Calcium availability in the soil and in the plant. This allows for greater delivery of other nutrients.

FOR LAWN CARE, SPORTS TURF, AND LARGE TURF AREAS.

**** Not available in Greens/Mini particle sizing. ****

FEATURES AND BENEFITS OF USING VERDE-LAWN

- Provides available Calcium to the soil to raise or maintain pH levels.
- Reduces Hydrogen (H), Sodium (Na), and Chlorine (Cl) in the plant and soil.
- Improves germination, stimulates root growth, and enhances microbial activity.
- Makes fertilizers work better by improving nutrient uptake.
- Improves soil structure (flocculation, water infiltration).
- Supplies optimal Calcium (Ca) levels to plant cells to strengthen the plant's resistance to disease.
- Quicker response at lower rates.

APPLICATION RECOMMENDATIONS

To maintain optimum pH and growing conditions, apply **Verde-Lawn** at 5 pounds per 1,000 ft² or 220 pounds per acre at least twice per growing season, or as needed. Soil test recommendations should be used to determine liming needs.

To adjust pH, apply **Verde-Lawn** at 10 pounds per 1,000 ft² or 435 pounds per acre, or as needed. In most soils this can raise the soil pH up to one full point. Retest and reapply, if needed, at this rate.

Verde-Lawn Hydro™

Quick Acting Calcitic Limestone plus Soil Moisture Retention

37% Calcium (Ca)

Calcitic Limestone, combined with PHCA and soil wetting agents, improves Calcium availability in the soil and in the plant while providing improved soil moisture retention. This allows for greater delivery of other nutrients.

FOR LAWN CARE, SPORTS TURF, AND LARGE TURF AREAS.

**** Not available in Greens/Mini particle sizing. ****

FEATURES AND BENEFITS OF USING VERDE-LAWN HYDRO

- Provides available Calcium to the soil to raise or maintain pH levels.
- Reduces Hydrogen (H), Sodium (Na), and Chlorine (Cl) in the plant and soil.
- Improves germination, stimulates root growth, and enhances microbial activity.
- Makes fertilizers work better by improving nutrient uptake.
- Improves soil structure (flocculation, water infiltration).
- Supplies optimal Calcium (Ca) levels to plant cells to strengthen the plant's resistance to disease.
- Quicker response at lower rates.
- Provides soil moisture control benefits.
- Up to 45 days soil moisture control.

APPLICATION RECOMMENDATIONS

To maintain optimum pH and improve soil moisture retention, apply **Verde-Lawn Hydro** at 5 pounds per 1,000 ft² or 220 pounds per acre at least twice per growing season, or as needed. Soil test recommendations should be used to determine liming needs.

To adjust pH, apply **Verde-Lawn Hydro** at 10 pounds per 1,000 ft² or 435 pounds per acre, or as needed. In most soils this can raise the soil pH up to one full point. Retest and reapply, if needed, at this rate.

**Available Calcium now!!!
The only lime product that helps
retain moisture in the soil!**
